

## A CLOSER LOOK AT

# Emotional Health for Babies and Toddlers

### WHAT IS EMOTIONAL HEALTH?

Emotional health is learning how to express and manage feelings, learning about other people and yourself, and developing a sense of belonging within community and culture. It is the key to future development for children at every age.

By protecting early emotional health, children become more resilient to stress and are less likely to develop mental health problems down the road.

### INVESTING IN EMOTIONAL HEALTH

As our healthcare systems increase focus on disease prevention, we can benefit from a similar approach for the emotional health of babies and toddlers.

Investment in emotional health has proven returns for all stages of development. ★ **Prioritizing it means funding the needs of caregivers, so they can be responsive, nurturing, stable and safe for those they care for. These relationships are the most effective intervention to help children thrive.** ★

### POSITIVE RELATIONSHIPS ARE THE FOUNDATION FOR EMOTIONAL HEALTH

Of all the factors that are important to the health and well-being of infants and young children, including nutrition, sleep, learning, etc., relationships are the most important. Early relationship experiences shape brain development and influence all future relationships.

Promoting adult wellbeing and reducing family stressors is essential to ensuring caregivers can provide responsive, nurturing, stable and safe relationships for children to develop.

These supports benefit children's health and success as they grow. They also benefit caregivers, by alleviating distress and fostering healing.

### EVERYDAY ACTIONS MATTER

Think about everyday actions you can take to support caregivers and their children at work and at home. What can you do to support families in your community?

From volunteer service to individual acts of kindness, every day actions can improve your own and others' emotional health.

### WHAT'S MY ROLE AS A BEHAVIORAL HEALTH PROVIDER?

Infants and toddlers can have mental health disorders that affect development. Properly identifying and treating these disorders reduces risk factors in the long term:

- Ask about the children of your adult clients and help them connect to resources about caregiving or child and family therapy options
- Learn about child development and signs of emotional and behavioral challenges for young children
- Build your skills in practices that focus on relationships
- Proactively help find solutions to reduce stressors at the family level
- Center anti-racist, anti-biased, and culturally humble values
